Target Industries

Advanced Technology

Complete supporting facilities provide convenient conditions. In the industrial estate, advanced technology is the driving force to create a balance between production and energy, establish energy security to reduce dependence on the main grid system, control water production and wastewater treatment systems, monitor air quality, maintain park safety, and care for the industrial estate environment

Low Construction Cost

A new starting point, a new field, and a prime location with worthy investment prices. The use of advanced technology that reduce costs in order to enhance market competitiveness and value engineering-based construction management. A good potential for advanced and modern public utility system management that create effective added value for the economic system and resource management

Smart City

Driven by modern science and technology, connect society and economy, concern on environmental protection, use of advanced technology for systematic management, care for the environment, and improve efficiency. Effectively connect various transportation systems to improve transportation convenience and safety. Promote learning that is conducive to the development of knowledge and skills. Reduce social and economic inequality, and further open for creativity, innovation and public participation.

Livable Environment

The surrounding environment is livable and the facilities are complete. Easy access to important places such as shopping malls, restaurants, international schools, universities, vocational colleges, hospitals, markets, supermarkets, hotels, resorts, spas, hot springs, swimming pools, golf courses, etc.

Sufficient Human Resources

Cooperate with local educational institutions to support talent development in the region. Provide training and practice places for cultivating local college students and talents so there will be sufficient human resources for related industries in the industrial estate.

Mission Vision
